 AND MOTION TO EXCLUDE MERITS
 OPINIONS OF DR. MARC RYSMAN;
 MEMORANDUM OF POINTS AND
 AUTHORITIES IN SUPPORT THEREOF**

Date: TBD
 Time: TBD
 Judge: Hon. James Donato
 Courtroom: 11, 19th Floor,
 450 Golden Gate Ave,
 San Francisco, CA 94102

NOTICE OF MOTION

TO ALL PARTIES AND THEIR COUNSEL OF RECORD:

PLEASE TAKE NOTICE THAT on a date to be set by the Court, in Courtroom 11, 19th Floor, 450 Golden Gate Avenue, San Francisco, CA 94102, before the Honorable James Donato, the undersigned Defendants (“Defendants”), will and hereby do move the Court for an order excluding the testimony of Plaintiff States’ and Consumer Plaintiffs’ (collectively, “Plaintiffs”) proffered expert Dr. Marc Rysman, on the ground that testimony on the referenced subjects is not admissible under Federal Rule of Evidence 702. This motion is based upon this Notice of Motion, the attached Memorandum of Points and Authorities, the concurrently-filed declaration of Rishi P. Satia, and the exhibits to that declaration, the concurrently-filed Proposed Order, the pleadings and records on file in this action, and upon additional evidence and argument that may be presented before or at the hearing of this motion.

ISSUES TO BE DECIDED

Whether the Court should exclude the expert opinions on damages of the Plaintiff States’ expert Dr. Marc Rysman as unreliable under Rule 702 of the Federal Rules of Evidence and *Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. 579 (1993).

INTRODUCTION

In addition to relying on the multiple overcharge and consumer subsidy damages models offered by Dr. Hal Singer, Plaintiff States and Consumer Plaintiffs (collectively, “Plaintiffs”) also seek damages based on a model offered by Dr. Marc Rysman.¹ In an attempt to show injury and damages, Dr. Rysman creates a “variety” model that purports to quantify the increase in consumers’ happiness that would result from supposedly having more Android app variety in a world without Google’s challenged conduct. This model is inconsistent with Dr. Singer’s overcharge damages model. Dr. Singer opines that *all* developers would have significantly reduced prices if they had paid lower service fees instead of keeping those savings for themselves. Dr. Rysman’s variety model assumes that *no* developers would have reduced prices. Instead, he opines that because developers would keep the savings from lower service fees, app development would be more profitable, which would have resulted in the entry of hundreds of thousands of additional Android apps. However, Dr. Rysman cannot identify even one app that did not enter because Google’s service fees were too high. His “variety” model should be excluded for three reasons.

First, Plaintiffs cannot prove injury or recover damages based on Dr. Rysman’s theory as a matter of law. The antitrust laws only permit consumers to seek damages for injuries to business or property. Dr. Rysman’s model does not evaluate or estimate damages for such injuries. Rather, Dr. Rysman estimates the value of consumers’ lost happiness—or “utility” in

¹ Although Dr. Rysman was retained by the Plaintiff States, when serving their opening expert reports, Consumer Plaintiffs indicated “they also may rely on and present evidence at trial from Dr. Marc Rysman regarding the calculation of variety damages.” *See* Ex. 1, L. Mason email to Defendants dated October 3, 2022. All references to “Ex.” are exhibits to the concurrently-filed declaration of Rishi P. Satia.

1 economic terms—which is a personal injury that is not compensable under the antitrust laws.
2 Thus, Dr. Rysman’s variety model is simply irrelevant to both antitrust injury and damages.

3 *Second*, Dr. Rysman’s “variety” theory is disconnected from Plaintiffs’ claims as alleged
4 in the class certification motion and complaints. As the Court previously found, the Consumer
5 Plaintiffs’ legal theory of harm is that consumers paid inflated prices for transactions involving
6 apps that did enter the market in the real world. The State Plaintiffs alleged the same theory in
7 their Complaint. But Dr. Rysman has calculated aggregate damages based on a psychic injury to
8 consumers from the lack of additional variety from apps that did *not* enter the market in the real
9 world. The U.S. Supreme Court’s decision in *Comcast Corp. v. Behrend* forecloses an injury
10 and damages model that is disconnected from Plaintiffs’ legal theories.

11 *Third*, even if injuries to happiness were recoverable under the antitrust laws, Dr.
12 Rysman’s variety model is unreliable because it makes assumptions that Dr. Rysman has
13 repeatedly conceded do not reflect the real world. Dr. Rysman assumes that all apps have the
14 same price, expected quality, marginal costs, and quantity sold even though he admits that this
15 obviously is not true in the real world because apps vary widely across all of these dimensions.
16 He necessarily admits that his model is an “abstraction” from reality. “Abstraction” away from
17 the real world to calculate consumers’ lost “happiness” may be appropriate for a faculty lounge,
18 but it is not a reliable basis for a jury in a federal courtroom to award billions of dollars in
19 damages under the antitrust laws. That is why no Court has ever permitted an expert to estimate
20 damages using anything remotely like Dr. Rysman’s “variety” model. The Court should exclude
21 Dr. Rysman’s testimony based on that model as to both injury and damages.

22 Finally, Dr. Rysman also estimates injury and damages based on alleged overcharges to
23 consumers—the same theory of injury and damages advanced by Dr. Hal Singer. It is improper
24 for the States and Consumer Plaintiffs to put forward two experts to estimate jury and damages
25 based on the same theory, though both should be excluded as unreliable. Dr. Rysman admits that
26 his overcharge models depend on pass-through, but concedes that he has not estimated and is not
27 opining on the pass-through rate. Indeed, he testified that he has no opinion on whether a 0
28

1 percent or 100 percent pass-through rate is more likely, which means that his opinions on
 2 overcharge damages are completely speculative. Because Dr. Rysman has not even attempted to
 3 calculate a pass-through rate, these models cannot reliably estimate injury or damages.

4 **BACKGROUND**

5 Dr. Rysman’s variety model seeks to quantify an alleged “increase” in “consumers’
 6 utility” from “a greater variety of apps on the market” that he claims would result if Google had
 7 not engaged in the challenged conduct. Ex. 2, Rysman Report ¶ 561. Dr. Rysman posits that if
 8 Google had reduced its service fees in a world without its challenged conduct and developers
 9 would not pass on those lower fees by reducing prices, “more apps would enter the market”
 10 because developers would “expect higher profits that are more likely to cover developers’ fixed
 11 costs or make developing a new app more profitable than their next best alternative option to
 12 developing an app.” *Id.* at ¶ 562.

13 In his model, “consumers intrinsically value varieties (more apps).” *Id.* at ¶ 563. Dr.
 14 Rysman’s model “is trying to calculate how much happier consumers would be if they had more
 15 variety of apps.” Ex. 3, Rysman Dep. Tr. at 81:22-82:1. In other words, he is attempting to
 16 calculate, as a measure of injury and damages, the total dollar value one would need to give
 17 consumers to make them as happy as they would have been in the but-for world. *See* Ex. 2,
 18 Rysman Report ¶ 563. As Dr. Rysman admitted, his “model is not trying to calculate the actual
 19 dollars that consumers would have in their pocket if they had an additional app variety.” Ex. 3,
 20 Rysman Dep. Tr. at 82:20-25. Nor does it attempt to value the apps a consumer would have
 21 purchased in the but-for world compared to the apps that the consumer purchased in the real
 22 world. Moreover, Dr. Rysman only tries to measure the increase in happiness in the aggregate
 23 and does not attempt to calculate how any individual was harmed. *Id.* at 83:1-12.

24 Dr. Rysman models the Android app ecosystem using a “symmetry assumption” that
 25 “assumes all apps are the same in a number of ways.” *Id.* at 95:21-96:15. Dr. Rysman admits
 26 that this is an “abstraction.” Ex. 4, Rysman Rebuttal Report ¶ 350 (“To the extent I rely on
 27
 28

1 symmetry, it is an abstraction.”). Indeed, he repeatedly testified that his assumptions are at odds
 2 with reality:

- 3 • He “solve[s] the model as if all apps have the same prices” even though “in the real world
 4 ... all apps don’t have the same prices.” Ex. 3, Rysman Dep. Tr. 97:4-13.
- 5 • He “let[s] all the apps have the same marginal cost” even though he would “be surprised
 6 if they all had the same marginal cost in the real world.” *Id.* at 97:14-24.
- 7 • He “assume[s] that all apps have the same entry cost”, “[b]ut in the real world, all apps
 8 don’t have the same entry cost.” *Id.* at 97:25-98:13.
- 9 • When he “solve[s] the damages model, all apps have the same quantity,” but he admits
 10 that all apps “don’t have the same quantity of sales” in the real world. *Id.* at 98:14-99:3.
- 11 • He “assume[s] that all apps have the same quality” but agrees that “all apps don’t have
 12 the same expected quality.” *Id.* at 99:4-19.
- 13 • His model “assumes that each app generates revenue through the sale of a single product
 14 at a single price,” even though he “understand[s] that in the real world, apps may or a
 15 developer may monetize an app through several different prices or products at some
 16 level.” *Id.* at 101:8-102:2.

17 Dr. Rysman’s model also predicts a “substantial” increase in happiness from the entry of
 18 new apps in the but-for world because Dr. Rysman believes they would include “high-quality”
 19 apps. Ex. 2, Rysman Report ¶ 492. Common sense suggests that the apps that actually expected
 20 enough returns to enter in the real world contribute more to consumers’ happiness than the apps
 21 that did not expect enough returns to justify entry. Dr. Rysman rejects that proposition based on
 22 the assumption that app success is completely unpredictable. He assumes that an app launched
 23 by a large developer with a proven track record and billions in revenue is no more likely to
 24 succeed than an app launched by a hobbyist working in a garage. He allows for no variation in
 25 expected success based on any measurable factors such as past performance data, app
 26 developers’ app portfolio management and past success, or observable app characteristics such
 27 as price, category popularity, language support, package size, release date, market age, early
 28 entrant advantage, and promotional activity. Ex. 5, Leonard Report ¶ 147 & n.195.

For this “unpredictability” assumption, Dr. Rysman relies entirely on an unpublished,
 working paper. Ex. 2, Rysman Report ¶ 492 (citing Rebecca Janßen, Reinhold Kesler, Michael
 E. Kummer, and Joel Waldfogel, “GDPR and the Lost Generation of Innovative Apps,” NBER

1 Working Paper Series (2022) (“Janßen Paper”)). But the authors of that paper actually find app
 2 success is “partial[ly] predictabl[e]” and when “partial predictability” is imposed on the model in
 3 the study, it reduces *by half* any consumer welfare effect. Ex. 5, Leonard Report ¶ 150; Ex. 6,
 4 Janßen Paper at 32-33. Dr. Rysman did not test how partial predictability of app success would
 5 affect his analysis of injury and damages in this case.

6 When calculating the amount of variety damages that he intends to present at trial, Dr.
 7 Rysman “assume[s] that app and in-app prices do not change at all in response to reduction in
 8 Google’s [service fee] and that developers keep 100% of the commission reduction that [they]
 9 would obtain in the but-for world.” Ex. 2, Rysman Report ¶¶ 22, 562. Applying this 0% pass-
 10 through assumption to his model, Dr. Rysman predicts that in the but-for world, there would be
 11 an additional 338,993 apps that would offer paid downloads, in-app payments, or subscriptions, a
 12 73% increase from the actual world. Ex. 5, Leonard Report ¶ 155; Ex. 3, Rysman Dep. Tr. at
 13 104:9-105:1. However, Dr. Rysman did not communicate with any developer as part of his work
 14 on this case and has not identified even one of these more than 300,000 apps that supposedly
 15 would have entered the alleged market but could not do so because of Google’s service fee rates.
 16 Ex. 3, Rysman Dep. Tr. at 43:25-44:4, 89:20-25, 91:6-15.

17 Dr. Rysman testified that he was unaware of a model similar to his variety model—which
 18 he describes as an “abstraction away from . . . the real world”—being used in any other antitrust
 19 case or of any other economist that has used such a model to calculate a reasonable estimate of
 20 damages. *Id.* at 95:6-17, 101:8-102:10. He also conceded that he is unaware of any academic
 21 literature in which such “macroeconomic” models are used to calculate damages. *Id.* at 95, 100-
 22 101.

23 In his opening expert report, Dr. Rysman also offers two other models of injury and
 24 damages: an overcharge model that purports to calculate “the direct effect of an inflated
 25 commission . . . on prices” charged by app developers, and a “total welfare” model that combines
 26 his overcharge and variety models. Ex. 2, Rysman Report ¶¶ 555, 564. Dr. Rysman testified
 27 that his overcharge model depends on the pass-through of Google’s service fee, but agreed that
 28

1 “[i]f developers would not pass through any elevated service fee that they pay to Google, then
 2 consumers would not experience any overcharge damages.” Ex. 3, Rysman Dep. Tr. at 49:21-
 3 50:7, 50:15-20. However, Dr. Rysman testified that he is not “provid[ing] an opinion on pass
 4 through.” *Id.* at 53:14-20. He further testified that his “report takes no position on what the
 5 pass-through rate” is, *id.* at 50:21-23, and that he does not “opine on the level of reductions in
 6 Google’s commissions that would be passed on.” *Id.* at 50:24-51:2; *see also* Ex. 4, Rysman
 7 Rebuttal Report ¶¶ 319, 320. In fact, Dr. Rysman testified that he does not have an opinion
 8 whether it is more likely that the pass-through rate is zero percent or 100 percent.” Ex. 3,
 9 Rysman Dep. Tr. at 51:3-6. Rather, he says he “consider[ed] damages estimates for 0% and
 10 100% pass-through rates (‘Variety Effects’ and ‘Total Damages’ versions in my Opening
 11 Report)” but chose the “Variety Effects” model as his damages estimate to be “conservative.”
 12 Ex. 4, Rysman Rebuttal Report ¶ 319. But he also claims his “Total Damages” model can
 13 accommodate any pass-through rate, *id.* at ¶ 320, even though he has no opinion regarding that
 14 rate.

15 LEGAL STANDARD

16 Under Federal Rule of Evidence 702, a court acts as a gatekeeper and “must ensure that
 17 any and all scientific testimony or evidence admitted is not only relevant, but reliable.” *Daubert*
 18 *v. Merrell Dow Pharms., Inc.*, 509 U.S. 579, 589 (1993). “Plaintiffs have the burden to prove
 19 that their expert’s testimony is admissible. *Bourjaily v. U.S.*, 483 U.S. 171, 175–76 (1987); *DSU*
 20 *Med. Corp. v. JMS Co.*, 296 F. Supp. 2d 1140, 1146–47 (N.D. Cal. 2003). This requires
 21 Plaintiffs to show that their expert’s testimony is “based on sufficient facts or data,” is “the
 22 product of reliable principles and methods,” and that the “expert reliably applied the principles
 23 and methods to the facts of the case.” Fed. R. Evid. 702(b), (d); *U.S. v. Hermanek*, 289 F.3d
 24 1076, 1093 (9th Cir. 2002) (citation omitted). “Relevance is sometimes given less attention as a
 25 gatekeeping factor, but it is as much a precondition of admissibility as reliability. An expert’s
 26 methods and analysis may be flawless, but ‘[e]xpert testimony which does not relate to any issue
 27
 28

1 in the case is not relevant and, ergo, non-helpful.” *CZ Services, Inc. v. Express Scripts Holding*
 2 *Co.*, Case No. 3:18-cv-04217-JD, 2020 WL 4518978, at *1, *4-5 (N.D. Cal. Aug. 5, 2020).

3 The Court will “exclude junk science that does not meet Federal Rule of Evidence 702’s
 4 reliability standards by making a preliminary determination that the expert’s testimony is
 5 reliable.” *Ellis v. Costco Wholesale Corp.*, 657 F.3d 970, 982 (9th Cir. 2011) (citing *Kumho Tire*
 6 *Co. v. Carmichael*, 526 U.S. 137, 145 (1999)); *In re Capacitors Antitrust Litig. (No. III)*, No. 14-
 7 CV-03264-JD, 2018 WL 5980139, at *11 (N.D. Cal. Nov. 14, 2018). “[N]othing in either
 8 *Daubert* or the Federal Rules of Evidence requires a district court to admit opinion evidence that
 9 is connected to existing data only by the *ipse dixit* of the expert. A court may conclude that there
 10 is simply too great an analytical gap between the data and the opinion proffered.” *Gen. Elec. Co.*
 11 *v. Joiner*, 522 U.S. 136, 146 (1997); *see also Daubert*, 509 U.S. at 592-93 (stating that expert
 12 testimony is not admissible where an expert’s opinion does not “fit” the “facts in issue.”).
 13 Moreover, under Rule 403 of the Federal Rules of Evidence, expert testimony must be excluded
 14 “if its probative value is substantially outweighed by a danger of . . . unfair prejudice, confusion
 15 of the issues, [or is] misleading [to] the jury.” Fed. R. Evid. 403.

16 **ARGUMENT**

17 Dr. Rysman’s variety damages model fails to meet the standards of Rule 702 and
 18 *Daubert*.

19 **I. DR. RYSMAN’S VARIETY MODEL IS BASED ON AN INJURY THAT IS NOT** 20 **COMPENSABLE UNDER THE ANTITRUST LAWS**

21 The Court should exclude Dr. Rysman’s variety model because it estimates damages for
 22 alleged “personal injuries,” which are not compensable under the antitrust laws. A plaintiff in an
 23 antitrust suit may only recover damages based on injuries to “his business or property.” 15
 24 U.S.C. § 15(a). Consequently, states bringing *parens patriae* actions on behalf of “natural
 25 persons residing” in such states may only “secure monetary relief . . . for injury sustained by such
 26
 27
 28

1 natural persons to their property.” 15 U.S.C. § 15(c).² “Personal injuries are not compensable
 2 under the Sherman Act.” *Bhan v. NME Hosps., Inc.*, 669 F. Supp. 998, 1013 (E.D. Cal. 1987),
 3 *aff’d*, 929 F.2d 1404 (9th Cir. 1991); *see also Reiter v. Sonotone Corp.*, 442 U.S. 330, 339 (1979)
 4 (“The phrase ‘business or property’ also retains restrictive significance. It would, for example,
 5 exclude personal injuries suffered.”); *Oregon Laborers-Emps. Health & Welfare Tr. Fund v.*
 6 *Philip Morris Inc.*, 185 F.3d 957, 963-64 (9th Cir. 1999) (holding that both the Sherman Act and
 7 RICO only allow damages for injuries to “business or property” and noting that even “medical
 8 expenses” are not “injury to business or property”); *Young v. Schultz*, No. 22-CV-05203-TSH,
 9 2023 WL 1784758, at *3 (N.D. Cal. Feb. 6, 2023) (holding “emotional distress” is not “injury to
 10 business or property”).

11 According to Dr. Rysman himself, his “variety” model “is trying to calculate how much
 12 happier consumers would be if they had more variety of apps.” Ex. 3, Rysman Dep. Tr. at
 13 81:22-82:1. That is an estimate of damages for personal injuries, not injuries to “business” or
 14 “property.” Indeed, Dr. Rysman admitted that his “model is not trying to calculate the actual
 15 dollars that consumers would have in their pocket if they had an additional app variety.” *Id.* at
 16 82:20-25.

17 No court has permitted injury or damages to be shown in an antitrust case based on the
 18 value of the happiness that the consumers would have experienced without the alleged

19 _____
 20 ² Similarly, the state law antitrust claims asserted by Plaintiffs are limited to those involving
 21 injury to “business or property”. *See, e.g.*, Ariz. Rev. Stat. Ann. § 44-1408; Colo. Rev. Stat.
 22 Ann. § 6-4-111 (West); Alaska Stat. Ann. § 45.50.576 (West); Cal. Bus. & Prof. Code § 16760
 23 (West); Cal. Bus. & Prof. Code § 17204 (West); Conn. Gen. Stat. Ann. § 35-35 (West); Del.
 24 Code Ann. tit. 6, § 2108 (West); D.C. Code Ann. § 28-4507 (West); Fla. Stat. Ann. § 542.22
 25 (West); Ind. Code Ann. § 24-1-2-7 (West); Ky. Rev. Stat. Ann. § 367.220 (West); Ky. Rev. Stat.
 26 Ann. § 367.175 (West); La. Stat. Ann. § 51:137; Md. Code Ann., Com. Law § 11-209 (West);
 27 Mass. Gen. Laws Ann. ch. 93A, § 4 (West); Mass. Gen. Laws Ann. ch. 93A, § 11 (West); Mo.
 28 Ann. Stat. § 416.121 (West); Neb. Rev. Stat. Ann. § 59-821 (West); Nev. Rev. Stat. Ann. §
 598A.210 (West); N.H. Rev. Stat. Ann. § 356:4-c; N.J. Stat. Ann. § 56:9-12 (West); N.M. Stat.
 Ann. § 57-1-3 (West); N.D. Cent. Code Ann. § 51-08.1-08 (West); Okla. Stat. Ann. tit. 79, § 205
 (West); Or. Rev. Stat. Ann. § 646.780 (West); 6 R.I. Gen. Laws Ann. § 6-36-11 (West); S.D.
 Codified Laws § 37-1-14.3; Tex. Bus. & Com. Code Ann. § 15.20 (West); Utah Code § 76-10-
 3109; Va. Code Ann. § 59.1-9.15 (West); Wash. Rev. Code Ann. § 19.86.090 (West); W. Va.
 Code Ann. § 47-18-9 (West).

1 anticompetitive conduct. Harm to consumer utility—or “happiness”—is not an injury to
 2 “property” and thus not the type of injury that is compensable under the antitrust laws. *See*
 3 *Bhan*, 669 F. Supp. at 1013; *see also Berg v. First State Ins. Co.*, 915 F.2d 460, 464 (9th Cir.
 4 1990) (holding that harm to “peace of mind” describes a “personal injury in the form of
 5 emotional distress” and “not a claim for an injury to property”); *Heflebower v. JPMorgan Chase*
 6 *Bank*, NA, No. 1:12-CV-1671 AWI SMS, 2014 WL 897352, at *7 (E.D. Cal. Mar. 6, 2014)
 7 (finding that “[e]motional distress and loss of time” are not injuries to “business or property”).
 8 Dr. Rysman’s variety model must therefore be excluded under Rule 702 because it is not relevant
 9 to any appropriate measure of consumer damages under the antitrust laws. *See CZ Services*,
 10 2020 WL 4518978, at *4-5 (excluding damages expert based on lack of relevance).

11 **II. DR. RYSMAN’S VARIETY MODEL MUST BE EXCLUDED BECAUSE IT IS**
 12 **UNTETHERED TO PLAINTIFFS’ THEORY OF LIABILITY.**

13 Dr. Rysman’s variety model should also be excluded because it is not connected to any of
 14 Plaintiffs’ legal theories of harm. *Comcast Corp. v. Behrend*, 569 U.S. 27 (2013). “[A]ny model
 15 supporting a ‘plaintiff’s damages case must be consistent with its liability case, particularly with
 16 respect to the alleged anticompetitive effect of the violation.’” *Comcast*, 569 U.S. at 35 (internal
 17 quotation marks and citations omitted). A proposed model that purports to serve as evidence of
 18 damages “must measure only those damages attributable” to the theories alleged in the operative
 19 complaint. *Id.*; *see also DZ Rsrv. v. Meta Platforms, Inc.*, No. 3:18-CV-04978-JD, 2022 WL
 20 912890, at *7 (N.D. Cal. Mar. 29, 2022) (Donato, J.) (relying on *Comcast* and holding that “the
 21 damages model must reasonably reflect the claims and evidence in the case”); *Davidson v.*
 22 *Apple, Inc.*, No. 16-cv-4942, 2018 WL 2325426, at *23 (N.D. Cal. May 8, 2018) (excluding
 23 expert testimony that “unmoors Plaintiffs’ damages from the specific touchscreen defect alleged
 24 to have harmed them”).

25 An alleged injury to consumers’ happiness from the supposed loss of app variety appears
 26 nowhere in Consumer Plaintiffs’ complaint. *See generally* Consumer Plaintiffs’ Second
 27 Amended Complaint (CP-SAC), *In re Google Play Consumer Antitrust Litigation*, 3:20-cv-
 28 05761-JD, ECF. No. 241. As this Court noted in its order granting class certification based on

1 Plaintiffs’ overcharges damages theory but not Plaintiffs’ Play Points model, “[i]t is hard to
 2 square Play Points model with plaintiffs’ injury claims” given that the “[CP-]SAC never
 3 mentions fewer Play Points as another injury.”³ *In re Google Play Store Antitrust Litig.*, No. 20-
 4 CV-05761-JD, 2022 WL 17252587, at *13 (N.D. Cal. Nov. 28, 2022) (Donato, J.). Dr.
 5 Rysman’s variety model is even further removed from Plaintiffs’ theory of liability because the
 6 Consumer Plaintiffs did not ask the Court to certify a class based on such a theory. Nor could
 7 they. Dr. Rysman conceded that his variety model only calculates an “aggregate damages
 8 number,” and he has not “use[d] the app variety model to determine how any individual
 9 consumer was harmed.” Ex. 3, Rysman Dep. Tr. at 83:1-12 (“I don’t do that calculation.”). Dr.
 10 Rysman also has not analyzed how heterogeneity among consumers would affect how their
 11 happiness would be affected by increased app variety. *Id.* at 85:21-86:12, 88:4-89:19.

12 Similarly, “[i]t is hard to square” Dr. Rysman’s variety model with Plaintiff States’
 13 claimed injury to consumers as alleged in their First Amended Complaint (PS-FAC). *In re*
 14 *Google Play Store Antitrust Litig.*, 2022 WL 17252587, at *13. Like Consumer Plaintiffs’ SAC,
 15 Plaintiff States’ FAC focuses on consumers being harmed by paying a “supracompetitive
 16 commission” on Play store purchases. *See, e.g.*, PS-FAC, *State of Utah et al. v. Google LLC et*
 17 *al.*, 3:21-cv-05227-JD, ECF. No. 188 at ¶ 13 (“Consumers are harmed because Google forces
 18 them to pay a supracompetitive commission of up to 30% to purchase any non-‘free-to-
 19 download’ app.”); *id.* at ¶ 30 (“Google’s anticompetitive conduct has caused residents in each
 20 State to pay higher prices for apps on Android devices and for Android in-app payments, which
 21 has constituted ongoing, actual financial losses and has diverted resources that could otherwise
 22 be directed toward other purposes to the benefit of each State.”). The Plaintiff States do not
 23 allege decreased consumer happiness as an injury in their amended complaint. Thus, Dr.
 24 Rysman’s variety model should be excluded for Plaintiff States because it fails to “isolate
 25

26 ³ In its Order, the Court stated that it “has not relied on the Play Points model for certification,
 27 and leaves for another day the question of whether it might be presented to a jury.” *In re Google*
 28 *Play Store Antitrust Litig.*, No. 20-CV-05761-JD, 2022 WL 17252587, at *13 (N.D. Cal. Nov.
 28, 2022) (Donato, J.)

damages” resulting from the “theory of antitrust impact” asserted in their FAC. *Comcast*, 569 U.S. at 32.

III. DR. RYSMAN’S VARIETY MODEL IS UNRELIABLE AS IT IS BASED ON UNWARRANTED ASSUMPTIONS AND IS UNSUPPORTED BY ECONOMIC REALITY

Dr. Rysman admits that his variety model is an abstraction that relies on a number of assumptions that are contrary to real-world facts. As such, the model is incapable of reliably proving injury or calculating damages, but is more “akin to predicting criminality by feeling the bumps on a person’s head.” *DZ Rsrv.*, 2022 WL 912890, at *7 (citing *Gen. Elec. Co. v. Joiner*, 522 U.S. 136, 153 n.6 (1997) (Stevens, J., concurring in part)). Expert opinions based on “factual assumptions [that] are ‘indisputably wrong’” are excluded under *Daubert* and Rule 702. *In re MyFord Touch Consumer Litig.*, 291 F. Supp. 3d 936, 967 (N.D. Cal. 2018) (quoting *Guillory v. Domtar Indus. Inc.*, 95 F.3d 1320, 1331 (5th Cir. 1996) (excluding unreliable expert evidence “based on a fictitious set of facts”); *see also Guidroz–Brault v. Mo. Pac. R. Co.*, 254 F.3d 825, 830-31 (9th Cir. 2001) (excluding expert testimony that was “not sufficiently founded on the facts”); *Laumann v. Nat’l Hockey League*, 117 F. Supp. 3d 299, 315 (S.D.N.Y. 2015) (excluding opinion that “substitutes mathematical assumptions for actual, readily-obtainable information”); *Boyar v. Korean Air Lines Co.*, 954 F. Supp. 4, 8–9 (D.D.C. 1996) (stating that courts “exclude expert testimony because the factual assumption upon which it was based was faulty and plainly contradicted by the evidence”).

In *American Booksellers*, for example, this Court excluded plaintiffs’ antitrust expert because his proposed damages model “contain[ed] entirely too many assumptions and simplifications that [were] not supported by real-world evidence.” *See Am. Booksellers Ass’n, Inc. v. Barnes & Noble, Inc.*, 135 F. Supp. 2d 1031, 1041 (N.D. Cal. 2001) (finding that the expert did not base his model on actual data); *see also Toomey v. Nextel Commc’ns, Inc.*, No. C-03-2887 MMC, 2004 WL 5512967, at *12 (N.D. Cal. Sept. 23, 2004) (excluding expert’s damages model that “rest[ed] on unsupported and unrealistic assumptions” the expert conceded

1 at deposition were unrealistic). This Court should do the same with Dr. Rysman’s “variety”
 2 damages model.

3 *First*, Dr. Rysman admitted that he constructed his model as an “abstraction” by
 4 assuming that all apps have the same price, marginal costs, entry costs, quantity of sales, and
 5 quality. Dr. Rysman conceded at deposition that all of these assumptions do not reflect the real
 6 world. *See* Ex. 3, Rysman Dep. Tr. at 97:4-102:2. A model divorced from the facts and built on
 7 concededly false assumptions is not reliable.

8 This is clear from Dr. Rysman’s inability to identify a single app that would have entered
 9 the alleged market in the but-for world or a single developer that was discouraged from
 10 introducing an app because of Google’s service fee. *Id.* at 89:20-25, 91:6-15. His model
 11 predicts that there would be 73% *more* paid, IAP, or subscription apps that would enter in the
 12 but-for world. Ex. 5, Leonard Report ¶ 155. This translates into nearly 340,000 new apps. *Id.*;
 13 Ex. 3, Rysman Dep. Tr. at 104:9-105:1. But Dr. Rysman fails to provide any explanation about
 14 what these additional apps are, who would develop them, or why they were unable to enter in the
 15 actual world. Moreover, he did not perform a causal analysis to isolate how a reduction in
 16 Google’s service fee affected the number of apps available on the Play store. Ex. 3, Rysman
 17 Dep. Tr. at 105:16-24, 107:23-109:13.

18 *Second*, Dr. Rysman’s variety model assumes that the apps that supposedly would have
 19 entered the market (but that he cannot name) would have included many high-quality ones
 20 because app success is *completely* unpredictable. This “unpredictability” assumption defies the
 21 common-sense economic inference that firms’ actual behavior reflects heterogeneity in their
 22 expected returns: “in the actual world the best apps entered and lower-quality apps did not.” Ex.
 23 5, Leonard Report ¶¶ 147, 151. Moreover, low-quality apps “are not just those with a small but
 24 positive quality but could also include apps that are malicious,” which would *reduce* consumers’
 25 happiness. *Id.* Dr. Rysman’s only support for this “unpredictability” assumption is the
 26 unpublished Janßen Paper. But that paper found that “results on the decline in entry of
 27 successful apps . . . suggests partial predictability” and accounting for that partial predictability
 28

1 resulted in “about half” of the consumer welfare effect in the authors’ model compared to when
 2 the authors assumed complete unpredictability. *See* Ex. 6, Janßen Paper at 32-33. That is, Dr.
 3 Rysman’s only source for assuming that apps that did not enter would contribute as much to
 4 consumers’ happiness as those that did enter in fact recognizes this assumption is wrong. His
 5 failure to test how partial predictability affects his own findings renders his model inherently
 6 unreliable. Accordingly, Dr. Rysman’s calculation of the benefits of the apps that he assumes
 7 would have entered the market if Google had charged lower service fees is completely arbitrary
 8 and therefore cannot reliably support an estimate of even aggregate injury or damages.

9 Dr. Rysman’s mantra that it is “reasonable” to assume away from real-world facts
 10 because theoretical models are used in academic literature is unavailing. No court has allowed
 11 an expert to use a model similar to the one proposed by Dr. Rysman to show injury or damages.
 12 That is because Dr. Rysman’s model sits squarely in the realm of speculation. The Court should
 13 exercise its gatekeeper role and exclude the “variety” model because there is “too great an
 14 analytical gap between the data” and Dr. Rysman’s model. *Gen. Elec. Co. v. Joiner*, 522 U.S.
 15 136, 146 (1997).

16 **IV. DR. RYSMAN’S OVERCHARGE MODEL IS UNRELIABLE AS IT IS**
 17 **INCOMPLETE AND DUPLICATIVE OF HAL SINGER’S FLAWED PASS-**
 18 **THROUGH MODEL**

19 Dr. Rysman’s estimates of injury and damages based in whole or in part on alleged
 20 overcharges also should be excluded.

21 *First*, Consumer Plaintiffs and Plaintiff States also are relying on the opinions of Dr. Hal
 22 Singer, who puts forward a model that purports to estimate injury and damages from supposed
 23 overcharges. It is improper and unfair for Consumer Plaintiffs and Plaintiff States to put forward
 24 two experts to opine on the same damages theory. Such testimony would be cumulative. Fed. R.
 25 Evid. 403.⁴ It also would violate this Court’s order requiring Plaintiffs to avoid expert
 26 duplication. MDL ECF No. 440 at 2.

27 ⁴ It would also be impermissibly cumulative if Plaintiffs seek to bootstrap Dr. Rysman’s
 28 overcharge models on a pass-through rate determined by another expert (e.g., Dr. Singer), *see*

1 *Second*, Dr. Rysman’s estimates of injury and damages based on overcharges are not
 2 reliable because Dr. Rysman has not even attempted to estimate a pass-through rate. Dr. Rysman
 3 concedes that any overcharges to users depend on developers passing through reduced services
 4 fees by lowering their prices. He agreed that without pass-through, “consumers would not
 5 experience any overcharge damages.” Ex. 3, Rysman Dep. Tr. at 50:15-20. However, Dr.
 6 Rysman is not “provid[ing] an opinion on pass-through” and his “report takes no position on
 7 what the pass-through rate is.” *Id.* at 50:21-51:2, 53:14-20. He has no idea “whether it is more
 8 likely that the pass-through rate is zero percent or 100 percent.” *Id.* at 51:3-6. Since Dr. Rysman
 9 admits that overcharges depend on pass-through, he cannot reliably opine on overcharge injury
 10 or damages where he disclaims any opinion on pass-through.

11 **CONCLUSION**

12 For the foregoing reasons, Dr. Rysman’s variety damages model should be excluded
 13 under Federal Rule of Evidence 702 and *Daubert*.
